

Men's Screenings and Vaccinations by Age

Men 21-29

As young Native men, being a positive role model in your community and leading by example is vital. Receiving essential cancer screenings and vaccinations is one way to do that. Your role in the community is crucial. Talk to your relatives and loved ones about the importance of cancer screening.

No screening is recommended, but if you are having symptoms, discuss these with your health care provider. ●●●

PROSTATE

No screening is recommended, but if you are having symptoms, discuss these with your health care provider. ●●●

LUNG

No screening is recommended, but if you are having symptoms, discuss these with your health care provider. ●●●

COLORECTAL

HPV vaccination is recommended for all people ages 13-26 who haven't been vaccinated or who have not completed the vaccination series. The HPV vaccine is recommended for some adults ages 27-45 who are not adequately vaccinated. ●●●

HPV

The vaccine should be given before exposure to HPV through sexual contact.

The Hepatitis B vaccine protects infants, children, and adults from Hepatitis B. Talk to your health care provider. ●●●

The recommendations come from the Advisory Committee on Immunization Practices, the United States Preventative Services Task Force, and the American Cancer Society.

If there is a family history of any of these cancers, you could be at a higher risk for cancer. Talk to your health care provider about the best screening options for you.
